## **Sensum continues to be a reliable business partner during the COVID-19 outbreak**

After taking proper measures to suppress the COVID-19 outbreak in the past months, the number of infections is increasing again in the European Union as well as in Slovenia. The governments started to take stricter preventive measures to slow down the spread.

At Sensum we are acting responsibly on a company level in our working processes, and also on a personal level in our daily lives. The instructions provided by the National Institute of Public Health, Republic of Slovenia, are strictly followed, and are instantly put into practice within an established company system of preventive measures. In addition to common measures of social distancing and regular disinfecting, we have reorganised our working teams into smaller and isolated working groups and, where possible, resumed teleworking. So far none of our employees have been infected and we are doing our best to keep it this way.

Sensum continues to be a reliable business partner during the COVID-19 outbreak. All our business activities are carried out continuously without interruption. We have established remote services for many on-site business activities, which we successfully practice every day. Even the most technically demanding tasks, such as machine demonstrations, qualification testing, training, and aftersales support are successfully completed within the planned time.

With customer care in our hearts and innovation in our minds, we continue to expand our relationship with our partners in the pharmaceutical industry and with our suppliers.

Yours Sincerely,

*Dr. Rok Bernard, Managing Director*
